Vancouver, BC

Machine Learning

PyTorch, Scikit-Learn, OpenCV, PyMC3, Optuna

Programming / Geospatial

Python, GDAL, Shapely, Xarray, NumPy, SciPy, Pandas, Anaconda Computing

Linux, Bash, AWS, SQL/PostGIS, Docker, Git, QGIS

EXPERIENCE

Senior Machine Learning Scientist Data Scientist Feb 2022 – Present Sep 2020 – Feb 2022 **Computational Geosciences Inc**

- Deliver deep-learning mineral prospectivity mapping, as well as tailored machine learning models across the mining and energy sectors, working collaboratively with clients and an internal geoscience team.
- Improve internal deep learning methods by testing developments in areas such as unsupervised segmentation, graph neural networks, and data augmentation in collaboration with university partner.
- Develop deep learning systems from proof-of-concept to production; integrate with data fusion products assimilating geoscience data from local to continental scale.

Founder July 2018 – Sep 2021 Inlet Laboratories

- Independent consulting on projects such developing a Bayesian time series forecasting system for a medical school, business process mapping of personally identifiable information flow through a Fortune 500 company, and technology evaluation for a leading mining company.
- Handled all aspects of a small business including sales, legal, and finance.

Co-Founder July 2018 – Dec 2019 Prose AI

• Designed and optimized LSTM neural networks for real-time voice recognition in-browser and managed cloud infrastructure.

Postdoctoral Researcher July 2017 – July 2018 University of Edinburgh

- Developed new ice-sheet model for uncertainty quantification of sea level rise due to mass loss from the Antarctic ice sheet.
- Finite element modelling of ice flow using the FEniCS library leveraging automatic differentiation for solving inverse problems and error propagation.

PhD Candidate Oct 2013 – July 2017 University of Cambridge

- Quantified the partitioning of Greenland ice sheet melt among flowpaths by developing a hydrology model.
- Determined impact of increased surface melting on the Greenland ice sheet on ice-mass loss by developing and applying a coupled finite difference ice-flow and hydrology model to the Paakitsoq Region, Greenland.

Project Geophysicist May 2011 – July 2013 Scott Geophysics Ltd

• Co-lead field teams collecting geophysical data in remote areas.

EDUCATION

University of Cambridge

Oct 2013 - July 2017

• PhD in Polar Studies. Thesis: "Modelling the impact of surface melt on the hydrology and dynamics of the Greenland ice sheet"

University of British Columbia

Sep 2006 – May 2011

• B.Sc. Honours Geophysics with distinction. Thesis: "Strain Localization and Bulk Rheology Variation in Partially Molten Rocks: Insight from Analogue Model Experiments of Polyphase Materials."

INVITED SEMINARS

BGC Engineering March 2020

How machine learning and data science are becoming important tools in the earth sciences

Simon Fraser University

Oct 2018

• Modelling hydrological forcing of ice sheet velocities and uncertainty quantification of ice sheet forecasts

University of Cambridge

March 2018

Modelling seasonal acceleration of land terminating sectors of the Greenland ice sheet margin

University of Zurich

Feb 2018

Modelling hydrologically forced seasonal acceleration of the Greenland ice sheet margin

DATA STUDY GROUPS

University of Washington Waterhackweek

March 25 - 29, 2019

Analyzed modelled past and future streamflows in the Pacific Northwest.

Alan Turing Institute Data Study Group

April 16 - 20, 2018

• Improved research group's understanding of language recovery after a stroke using data analysis.
